

Our vertical leg adapter kit is designed for use with any of our EC- Series benders. The foot denoted in (A) above will require heavy sand bags or other weights when bending hoops to prevent it from lifting off the ground.

The cross braces will connect only one way. The bottom ends of the braces are bolted to the feet. The top ends attach to the clamp adapter via band clamp. The legs are then attached to any EC- Series bender with the two split tee clamps.
